

CLIMATE CATALYSTS 2023-24

GREEN VIDEO WINNING TEAM

Woodlem Park School, Dubai hosted the "Climate Catalyst" inter-school competition on November 18, 2023, with the goal of promoting innovation for a better world. The primary aim of this event is to heighten awareness regarding the pressing need for climate action while simultaneously nurturing creative thinking and problem-solving skills among participating students. Through collaborative endeavors of these young achievers, the event aspires to contribute to the creation of a more livable and sustainable future.

In the Green Video Contest, our exemplary Year 6 students, Jeff Jim, Vian Rao, and Salman Mohammed, showcased outstanding talent under the guidance of Ms. Jyoti Paraddi. Their passionate dedication to environmental awareness was skillfully conveyed through a captivating blend of animations, photographs, and articulate student talks. The video not only delivered a compelling message on the significance of climate action, renewable energy, and eco-friendly practices but also secured the top position, surpassing six other participating schools.

This victory is a testament to the commitment, diligence, and creativity of our students. Moreover, it underscores our school's unwavering dedication to instilling environmental consciousness in the younger generation. This achievement serves as a clear demonstration of our ongoing efforts to foster a sense of responsibility towards the environment, promote sustainable practices, and empower our students to positively impact the world around them.

"GREEN DREAMS, BRIGHT FUTURES: NURTURING SUSTAINABILITY, ONE ACTION AT A TIME!"
